

Telstra Exiting CAN Radio and ADSL Services by 16 November 2027

Description

Telstra Exiting CAN Radio and ADSL Services by 16 November 2027

Telstra has announced they are exiting their CAN Radio (also known as HCRC) and ADSL services as part of a move from aging technology. Technology supporting these services is now more than 40 years old and no longer reliable or suitable for modern connectivity needs. Newer networks are more secure, easier to maintain and better equipped for reliability.

Customers using these services will need to transition to more secure, resilient, and future-ready connectivity options before the exit date.

These services still play an essential role in regional, rural and remote communities. Impacted customers will be contacted by Telstra in the coming months with further information about the service exit and the most suitable alternative to transfer across to for your property.

Telstra are not exiting copper PSTN voice services. If you want to keep your phone service on copper PSTN, you'll need to buy a standalone Home or Business Phone plan.

You can find out more about the upcoming changes on Telstra's website in the following locations:

- [CAN Radio and ADSL Service Exit: What You Need To Know | Telstra](#)
- [CAN Radio: When technology reaches the end of the road](#)

If you'd like to understand which options may be available at your address sooner, you can also [contact](#) the Regional Tech Hub or visit our [Home Phone](#) and [Internet](#) pages.
