

Stallholder Connectivity Tips.

Small Business Help Guide

Do you run a stall/ pop up stand?

Stallholders at markets, fairs, and pop-up events face unique connectivity challenges. Ensuring reliable connectivity is essential for processing payments, managing inventory, and engaging with customers.

This guide provides practical solutions to help stallholders maintain robust connectivity in various settings.

Common issues

Poor Internet Connectivity: Weak or inconsistent internet signals, especially in remote or indoor event areas.

- Impact: Difficulty processing payments, accessing inventory, or using cloud-based systems.
- Solutions: Use mobile hotspots like Telstra Nighthawk, invest in a signal booster to enhance weak signals, and consider satellite internet for locations with lack of coverage/ congestion.

Network Congestion: Overloaded networks due to high user density at events.

- Impact: Slower internet speeds and disrupted transactions.
- Solutions: Use a dedicated mobile hotspot to avoid sharing public Wi-Fi. If mobile network is affected, use a satellite or fixed connection.

Power Supply Issues: Lack of reliable power sources to keep devices charged.

- Impact: Device shutdowns, unable to process transaction.
- Solutions: Carry high-capacity portable power banks or a small generator.

Device Malfunctions: Technical issues with POS systems or card readers.

- Impact: Inability to process payments, leading to lost sales.
- Solutions: Regularly test and maintain all devices. Bring backup devices.

Stallholder Connectivity Tips.

Practical tips

Test Your Setup

- Test all devices and systems before the event.
- Verify internet connectivity at the location in advance if possible.

Backup Plans

- Have a backup like cash.
- Bring spare devices and chargers.
